

SWAMP releases findings on sport fish contaminants

The results from the largest-ever state survey of contaminants in sport fish from coastal locations has just been released by the State Water Resources Control Board's Surface Water Ambient Monitoring Program (SWAMP). It found methylmercury and polychlorinated biphenyls (PCBs) are the two greatest concerns. The survey focused on sport fish because they provide information on human exposure and the condition of the aquatic food chain. The [full report](#) and [press release](#) are available on the [SWAMP](#) website.

Work groups offer chance to help with Delta planning

Participants are needed for several work groups that will help influence Delta planning efforts. The groups being run by the Sacramento-San Joaquin Delta Conservancy include [ecosystem restoration](#), flood resilience and climate change.
